

ABSTRACT

A seat back display with a protective cover for a back of a chair, comprising a display module received in a receiving chamber of the back of the chair, a protective cover for covering the display module thereby shielding the display module, and a connecting mechanism formed between the protective
5 cover and the back of the chair. The protective cover is secured to the back of the chair by the connecting mechanism. The protective cover is padded thereby protecting the display module and also hiding the display module from view so that it won't be stolen.
